

# Do You Know What's in VACCINATIONS?

## **GENETICALLY MODIFIED YEAST, ANIMAL, BACTERIAL & VIRAL DNA**

Can be incorporated into the recipient's DNA and cause unknown genetic mutations.

## **AMMONIUM SULFATE (salt)**

Suspected gastrointestinal, liver, nerve, and respiratory system poison.

## **BETA-PROPRIOLACTONE**

Known to cause cancer. Suspected gastrointestinal, liver, respiratory, skin and sense organ poison.

## **LATEX RUBBER**

Can cause life-threatening allergic reactions.

## **MONOSODIUM GLUTAMATE**

### **MSG/Glutamate/Glutamic Acid**

A neurotoxin being studied for mutagenic, teratogenic (developmental malformation and monstrosities), and reproductive effects. Allergic reactions can range from mild to severe.

## **ALUMINUM**

Implicated as a cause of brain damage; suspected favor in Alzheimer's Disease, dementia, seizures, and comas. Allergic reactions can occur on skin.

## **FORMALDEHYDE (formalin)**

Major constituent of embalming fluid; poisonous if ingested. Probable carcinogen; suspected gastrointestinal, liver, immune system, nerve, reproductive system and respiratory poison. Linked to leukemia, brain, colon, and lymphatic cancer.

## **MICRO-ORGANISMS**

Live and killed viruses and bacteria or their toxins. The polio vaccine was contaminated with a monkey virus now turning up in human bone, lung-lining, brain tumors & lymphomas.

## **MERCURY (thimerosal)**

One of the most poisonous substances known. Has an affinity for the brain, gut, liver, bone marrow and kidneys. Minute amounts can cause nerve damage and autoimmune disorders. Symptoms of mercury toxicity are very similar to those of autism.

## **PHENOL/PHENOXYETHANOL (2-PE)**

Used as antifreeze. Toxic to all cells and capable of disabling the immune system's primary response mechanism.

## **GLUTARALDEHYDE**

Poisonous if ingested. Causes birth defects in experimental animals.

## **GELATIN**

Produced from selected pieces of calf and cattle skins, de-mineralized cattle bones and pork skin. Allergic reactions have been reported.

## **GENTAMICIN SULFATE & POLYMYXIN B**

Allergic reactions can range from mild to life threatening.

## **POLYSORBATE-80**

Known to cause cancer in animals.

## **TRI (N) BUTYLPHOSPHATE**

Suspected kidney and nerve poison.

## **NEOMYCIN SULFATE (antibiotic)**

Interferes with Vitamin B6 absorption. An error in the uptake of B6 can cause a rare form of epilepsy and mental retardation. Allergic reactions can be mild to life threatening.

## **HUMAN & ANIMAL CELLS**

Human cells from aborted fetal tissue and human albumin. Pig blood, horse blood, rabbit brain, guinea pig, dog kidney, cow heart, monkey kidney, chick embryo, chicken egg, duck egg, calf serum, sheep blood and others.
